

Catalina Cisneros

Miami, FL | Remote | catacisneros.github.io

Professional Summary

Cybersecurity professional and educator with hands-on experience in offensive and defensive security, threat detection, and security operations. Background spans compliance, SOC analysis, network security, cryptography, and security education, with practical skills developed across real-world environments, technical labs, and teaching roles. Passionate about building secure systems and helping others understand the security landscape.

Technical Skills

Frameworks & Standards: NIST CSF, MITRE ATT&CK, OSI Model, TCP/IP

Security Tools: Splunk, Wireshark, Snort, Nmap, Burp Suite, Metasploit, MITMProxy, Shodan, CyberChef, auditd

Infrastructure & Programming: Docker, Nginx, Linux, Python, Bash, SQL, AWS, Git.

Platforms & Analytics: Catalyst, Salesforce, Power BI

Experience

CodePath - Cybersecurity Operations Fellow

Remote | May 2025 – Present

- Facilitated cybersecurity training programs focused on SOC operations, intrusion detection, and incident response.
- Executed hands-on attack and defense labs including phishing and malware scenarios, applying offensive and defensive security techniques.
- Conducted log analysis and threat investigations using Splunk SIEM and Wireshark across network and endpoint environments.
- Authored technical solutions documentation for security lab projects, translating complex attack and defense findings into structured written guides.

Amerant Bank - Security Operations & Digital Risk Associate

Miami, FL | Oct 2023 – Dec 2024

- Conducted risk assessments and security due diligence reviews for high-risk client accounts within a federally regulated environment, identifying control gaps and evaluating exposure to fraud and unauthorized access.
- Performed identity verification and behavioral transaction monitoring to detect fraud indicators and anomalous activity, escalating findings with structured documentation to senior stakeholders.
- Maintained structured security documentation across hundreds of accounts, supporting audit readiness and risk-based decision-making within a regulated operational environment.
- Collaborated cross-functionally with IT, Legal, Digital, and Operations teams to align security controls and digital onboarding processes with institutional policy and risk standards.

Security Projects

Cryptographic Messaging System

- Built an encrypted TCP-based messaging system using RSA and SHA-256, implementing end-to-end encryption and message integrity verification across a custom socket communication protocol.

Keylogger Proof of Concept

- Developed a proof-of-concept keylogger modeling keystroke capture and data exfiltration techniques, gaining practical understanding of endpoint threats, attacker tradecraft, and defensive countermeasures.

Linux Security Audit Lab

- Configured Linux audit rules using auditd to monitor file access, detect unauthorized privilege escalation attempts, and generate forensic-quality logs for threat investigation and incident response.

Education

Bachelor of Science in Computer Science — Florida International University

Certifications

CompTIA Security+ In Progress, 2026

CodePath Intermediate Cybersecurity 2025
